📋 PROFESSIONAL SUMMARY

Results-oriented Java Backend developer with expertise in Java programming and web development principles. Completed a rigorous 1200+ hour web development course at Masai School, demonstrating proficiency in Java frameworks and delivering high-quality code. Collaborative team player with excellent communication skills, eager to contribute to dynamic backend development projects.

📁 PROJECTS

FAUGET 📄

GitHub 📄

Developed FAUGET, a website inspired by Souled Store, an online clothing brand, providing users with a similar shopping experience.

Tech Stack: HTML | CSS | JavaScript

Features:

- User authentication for secure access to user-specific functionalities.
- Admin authentication to manage product details and transaction information.
- Displaying all available products for users to browse and select from.
- Filtering products based on price and category to help users find specific items.
- Adding products to the cart and removing them as needed.
- Admin privileges to access and add new product details.
- A solo project developed within 5 days.

TCG_Stocks

GitHub 📄

TCG_Stocks is a comprehensive console-based trading platform inspired by successful platforms like Zerodha.

Tech Stack: Java

Features:

- User, Admin, and Broker authentication for secure access to different functionalities.
- The user console allows users to buy and sell stocks, view and add money to their wallets, and access their portfolio and transaction history.
- Broker console enabling admins to manage and monitor all active trader accounts, view transaction histories, and track system-wide transactions.
- Admin console providing oversight of active broker and trader accounts and allowing admins to monitor all system transactions.
- A solo project developed within 5 days.
